PROFESSIONAL SUMMARY

Generative AI Engineer with proven expertise in building production-scale LLM solutions and enterprise AI platforms. Specialized in AWS Bedrock agent orchestration, multi-project integration architecture, ServiceNow incident automation, and LLM quality assurance. Currently architecting end-to-end AI platforms with real-time evaluation dashboards and multi-agent workflows for enterprise clients at Cognizant.

CORE COMPETENCIES

AI & LLM: AWS Bedrock (Agents, Agent Core), RAG Systems, RAGAS (Evaluation), DeepEval (LLM Quality Assurance), Agentic Workflows, Prompt Engineering, ServiceNow Integration

Backend: Python, FastAPI, Flask, SQLAlchemy, REST APIs, Service-Oriented Architecture, Serverless Design

Databases & Cloud: PostgreSQL, DynamoDB, AWS (Lambda, ECR, RDS, CloudWatch, S3, CodeBuild, CodePipeline, Bedrock, EventBridge), Azure CICD, Docker, Kubernetes, Terraform, Git

Currently Learning: LangChain, LangGraph (LLM orchestration), Model Context Protocol (MCP) for advanced agentic AI development

PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER

Cognizant Technology Solutions Pvt Ltd, Remote | Jul 2026 - Present

- Leading enterprise generative AI solutions with AWS Bedrock agents and Agent Core orchestration across multiple client projects and platform integrations
- Building serverless backend services (Python/FastAPI) for LLM inference, agentic workflows, and multi-project AI automation at enterprise scale
- Integrated ServiceNow with Neuro AI platform enabling automated incident management, SOP knowledge base integration, and intelligent RCA workflows
- Implemented multi-project agent integration architecture where AI agents from Neuro-AI platform are consumed by external applications (chatbots, dashboards)
- Architecting end-to-end evaluation & monitoring dashboards with real-time performance tracking, user interaction logging, and LLM quality assurance (RAGAS, DeepEval frameworks)

JUNIOR SOFTWARE ENGINEER & PLATFORM ENGINEER

Cognizant Technology Solutions Pvt Ltd, Bengaluru, IN | Dec 2024 - Jun 2026

- Built agentic workflows and AWS Bedrock integrations for Neuro-AI conversational platform; deployed GenAI solutions across AWS with RAG systems
- Developed scalable FastAPI backend services supporting multi-agent AI systems with prompt engineering and production deployments
- Involved in prompt engineering, LLM orchestration, and AI workflow customization tailored to specific client requirements
- Actively engaged in continuous upskilling through internal AI enablement programs, focusing on LLM architecture, vector databases and model deployment best practices

SOFTWARE ENGINEER TRAINEE

Cognizant Technology Solutions Pvt Ltd, Bengaluru, IN | Dec 2023 - Nov 2024

- Completed intensive training in DevOps, CI/CD, backend development, and cloud fundamentals; transitioned to backend development with proven contributions
- Contributed to production solutions with senior mentorship, building expertise in containerization (Docker), CI/CD pipelines, and Agile methodologies
- Learned enterprise development practices including version control, automated deployments, and collaborative software engineering

EDUCATION

Master of Computer Applications (MCA) | Dayananda Sagar College of Engineering, Bengaluru | 2022-2023 | SGPA: 8.62

Bachelor of Computer Science (B.Sc) | Mangalore University | 2018-2021 | 85.98%

CERTIFICATIONS

- AWS Certified AI Practitioner - Amazon Web Services
- Generative AI for Developers & Machine Learning Engineers - GCP
- FastAPI Masterclass - Udemy
- CE101: Context Engineering 101 - Cognizant
- AWS Generative AI Learning Plan - Technical Professionals - Amazon Web Services
- AWS Agentic AI Learning Plan - Technical - Amazon Web Services

PROJECTS

NEURO-AI ENGINEERING PLATFORM | Cognizant

Python, FastAPI, AWS Bedrock, PostgreSQL, RAGAS, DeepEval, ServiceNow

- Architected enterprise-grade conversational AI platform with AWS Bedrock agent integration, custom action groups, and intelligent workflow automation
- Integrated ServiceNow ITSM with Neuro AI application enabling automated IT service requests, incident management, and intelligent workflow routing
- Led multi-project integration initiatives enabling seamless deployment across multiple enterprise client environments with customized configurations
- Built RAG pipelines using vector databases and deployed serverless solutions on AWS Lambda with CodePipeline automation
- Evaluated LLM responses using RAGAS and DeepEval frameworks ensuring production-grade quality assurance and performance monitoring

AGRI-TECH: CROP RECOMMENDATION SYSTEM | Dayananda Sagar College

Flask, React.js, Machine Learning, Python

- Developed intelligent crop recommendation application considering soil quality parameters for region-specific agricultural insights
- Built full-stack web application with Python backend API and React frontend
